

Increasing Tension and Geopolitics in the Arctic

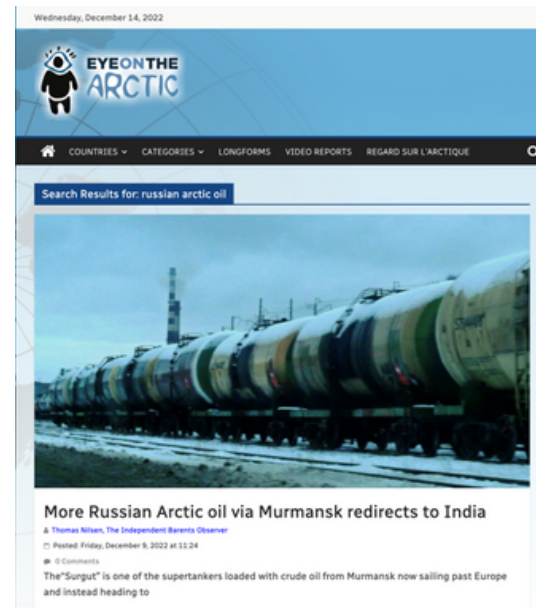

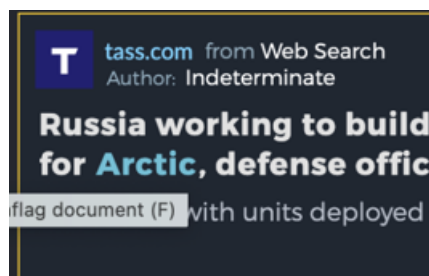

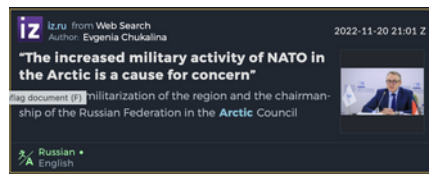

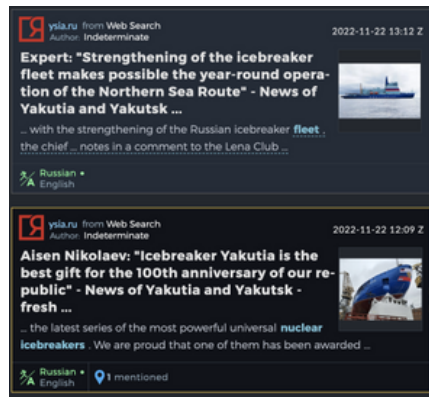

Open-Source Intelligence in Action

Background

- The Arctic is the scene of growing geopolitical competition and tensions.
- Climate change has eased access and use of sea routes and ports in the area, and led to increased interest from various nations in shipping, resources, fishing, tourism, and development.
- The Northern Sea Route is the shortest maritime route between Europe and East Asia; 30-40% shorter, saving time and money.
- Climate change has also opened up development in the Arctic, including scientific and military activities.
