

China's First Population Decline in 60+ Years

Open-Source Intelligence in Action

Background*

- China's population down by 850k from last year
- Deaths outnumbered births for first time since the Great Famine (1959-61)
- Trend can impact workforce size, economic output, and politics
- Birth rate fell to lowest ever of 6.77 births per 1,000 people; Rate has been on the decline despite policy changes such as ending the controversial "one-child" policy
- Trend may continue or even increase given effects of Covid-19 pandemic

Deeper Insight

Babel Street analysts, harnessing the power of publicly available information by drawing on English and Non-English language sources, gathered insight on this geopolitical situation from a wide variety of perspectives. Using these techniques improves situational awareness and offers deeper insights that are difficult to find through traditional outlets.

Post: What China's Population Decline Means For Its Future (201790718.643581)

China's "zero-COVID" policy and the continued effects of the one-child rule contributed to the country's population decline. Northeastern experts say, and a reduction in its labor force could push the manufacturing giant to bring in migrant workers.

On Jan. 17, China's National Bureau of Statistics reported that the country's population was 1.41 billion, a decline of 850,000 compared to the previous year. The news made a big splash around the world as it meant that India had surpassed China in population.
