AI Informant + Babel Street Data
Proactive Threat Detection That Works for You

Organizations face a complex and dynamic threat landscape. From nation-state actors to localized risks, the dangers are diverse and constantly evolving. Compounding this, organizations are likely grappling with:

- **Data Overload** — The sheer volume of publicly available information (PAI) on the surface web, social media, and the dark web is impossible to analyze manually, yet it contains critical intelligence.

- **Resource & Budget Constraints** — Many organizations lack the dedicated analysts or financial resources to operate high-cost, complex enterprise threat intelligence platforms and their associated data feeds.

- **Delayed or Incomplete Intelligence** — Without access to comprehensive, global, multi-lingual data (including hard-to-reach sources), and the tools to analyze it quickly, threats can be missed or identified too late for effective action.

- **Complexity & Operational Burden** — Traditional tools often require significant setup, training, and ongoing maintenance, diverting your team from core security functions.

The Solution is Here: The Simplicity of the CARVER+ AI Informant Platform with the Power of Babel Street's Global Data

The CARVER+ AI Informant platform now seamlessly integrates Babel Street's leading global data, providing a groundbreaking approach to threat analysis. Together, we equip your organization with real-time insights delivered through a user-friendly, AI-driven platform, allowing for proactive risk mitigation even without dedicated analyst resources.

- **Turn-Key Intelligence** — CARVER+ enables organizations to get up and running quickly with an "out-of-the-box" solution. The AI Informant platform is designed for user-friendliness, eliminating the need for extra resources such as developers, engineers, or dedicated analysts to create and maintain an advanced AI threat detection platform.

- **Extensive Global Data Reach** — The AI Informant platform uses Babel Street's Insights Documents API to access billions of documents from open sources, social media, forums, and the dark web, covering over 200 languages. This extensive data helps identify various threats, including physical, cyber, political, and economic risks.

- **AI-Driven Data Insights** — Our advanced search technology analyzes global data sources and provides alerts on threat identification, influence mapping, and trending topics. Key insights are displayed in a single dashboard, offering a comprehensive understanding of threats so you can make better decisions.

Versatile Intelligence for Your Critical Security Use Cases

The enhanced CARVER+ AI Informant platform provides targeted intelligence across a wide range of applications:

- **Situational Awareness** — Maintain a real-time overview of the emerging threat landscape,, sentiment shifts, and potential disruptions near your locations, enabling proactive adjustments.

- **Event Safety** — Monitor online chatter before and during high-profile meetings, conferences, or public gatherings for possible threats. Receive timely notification of protests, disruptions, or emergencies as they evolve for improved security response efforts.

- **Executive and VIP Protection** — Safeguard your key personnel with continuous monitoring of online sources for threats, negative campaigns, and doxing attempts, allowing for proactive security measures and informed risk assessments.

- **Force Protection** — Improve safety for law enforcement and security teams by monitoring threats to facilities or individuals, assessing risks based on local online chatter, and maintaining operational security awareness.

- **Insider Threat** — Monitor online forums, paste sites, and the dark web for signs of disgruntled individuals' communications, planned leaks, or sensitive company data shared by internal sources.

- **Campus Safety** — Obtain a real-time overview of the threat landscape for emerging events, sentiment shifts, and potential disruptions targeting institutions, faculty, and students, allowing for early intervention and enhanced security preparedness.

- **Travel Risk** — Safeguard traveling personnel by monitoring real-time, location-specific intelligence on security threats, civil unrest, natural disasters, or health hazards, derived from continuous analysis of multilingual local public data sources.

Whatever your primary security focus, the enhanced CARVER+ AI Informant platform filters the noise and delivers the specific, actionable intelligence you need to protect what matters most.
